

Je höher Dopamin, desto höher

→ Doku anschauen:

15.07.18

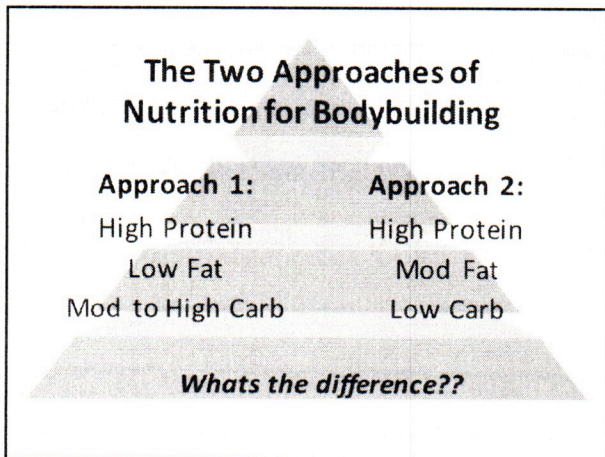

→ Der normale Mensch ist mehr an Wohlbefinden interessiert.

Das sind zu starke Extreme

Neurotransmission: Je höher Serotonin, desto toleranter für Carbs (17)
Serotonin ist abhängig von Östrogen (Modul 4 Untereinheiten anschauen bzgl. Neurotransmission & Carbs)

→ Frau hatte Reichenfalte von 2mm & 17% Fett. Hatte 1 Jahr keine Carbs. Hat Fett auf 30-40% gesenkt und Carbs rein. SR ist auf 11%.

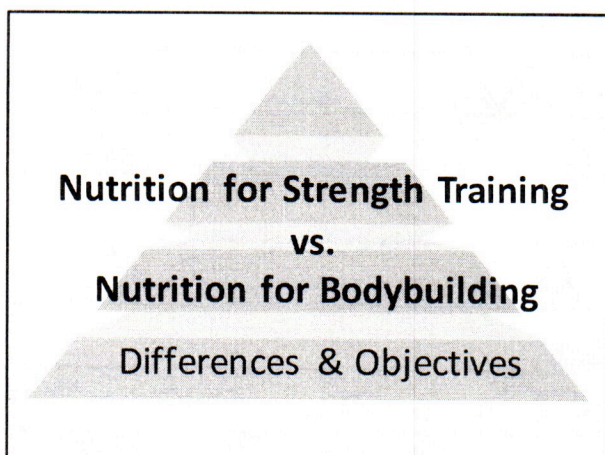

Beides funktioniert.

2 Hauptursachen

→ Low Carb = Man kann mehr Kalorien essen und weiterhin Fett verlieren (Buch: The Ketogenic Diet [PDF]).

→ Wie fühlt man sich dabei?

→ Das Gehirnt verrät viel.

BB Approach is to get as big and lean as possible

ST ... to get as big and strong as poss.

→ Wenn nicht Carb-Tolerant: Viele Carbs erhöhen Inflammation.

Viel auf Kunder hören: Wird es durch Carbs mehr? Was macht Reichenfalte? Danach Carbs richten.

YPSI Green Week - Functional Fasting

- Don't get hungry. Get in more meals. And if it's 12 a day. That's ok.
- Adjust training volume of the current program if necessary
- Drink plenty of water. No Tea. No Coffee. Herbal infusions are ok. Lime and Lemon juice are good.
- Eat one green vegetable a day. Don't mix.
- Rotate the green vegetable every day
- Steam the vegetables or eat them raw.
- Choose the Supplements based on the YPSI Skinfold measurement
- Min. 8h of sleep at night
- Min 3 days. Max. 21 days. Standard is 5 days.

→ Wenn jemand von über 20% kommt und ein Plateau erreicht

„Continuous Glucose Monitoring“

- Continuous Glucose Measurement every couple minutes vs. every couple hours – Advantages?
- Tissuesugar vs. Bloodsugar
- Glycemic Index/Load is a statistical Average with great individual differences → “Wired to eat” → Minipatties +72 vs. Nutella-Crepes +3

→ There is just a little time gap of 10 Minutes from eating to response

CGM Analysis in the Real World

- Glucose-Response to a certain food
 - Glucose-Curve in between meals
 - Glucose-Curve at night (Watch out!)
 - Glucose-Response to a certain activity such as work, strength training and intervals
 - Glucose-Response to a certain amount of carbs
 - Glucose-Response to a certain combination of foods
- The Goal is a constant blood sugar level with maximal carbohydrate intake

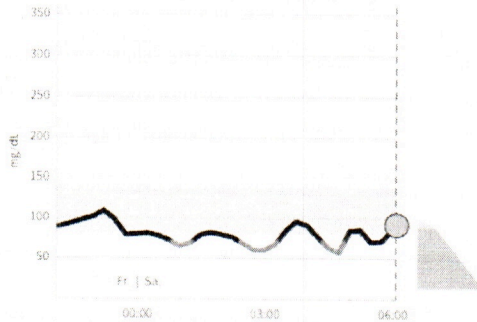

→ Too low bloodsugars at night < 50 leads to ^{more} cortisol & less melatonin

→ Eat will fix it. Protein to stabilize; maybe little of complex carbs

→ Intervalle beim Blutucker enorm verringern durch die hohe glykogen Absorption

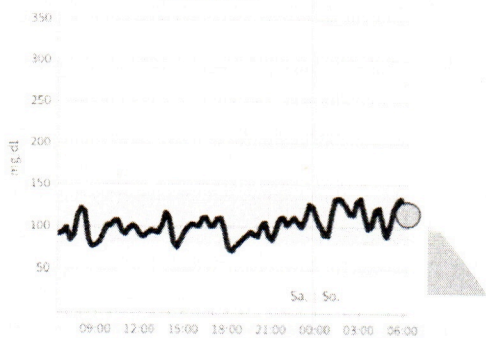

→ Warum es früher so viele Leute noch Carbs zum Frühstück hatten und rauchen? Weil sie ihr Cortisol wieder haben müssen.

Day 2 – 75g Oats plus 50g Eggwhites

→ Drop wird besser

Day 3 – 125g Oats plus 50g Eggwhites

→ Drop wird besser

Goals of CGM as a Bookkeeping-Tool:

- Optimization of Carbohydrate Choise
- Optimierung of Carbohydrate Timing
- Maximizing the relative Carbs Volume
- Maximizing the absolute Carbs Volume

→ Maximizing Hypertrophy & Fatloss

→ Es gibt einen großen Unterschied zwischen unter der Woche & Wochenende, da kein Stress, keine Arbeit, Psycho

→ Standing auf 90/145 zu sein ist zu wenig für Muskel- und Kraftaufbau. Wäre ein Zeichen für zu wenig Essen. Bloods. Has to drive up with more Food?

The „Fish-Month“

- No Meat, Eggs, Dairy for one month
- Protein sources are exclusively Fish, Seafood and Aminos
- The main objectives is lowering inflammation and especially the Subscap Skinfold
- Great to bust a plateau in Fatloss with client that are prone to higher inflammation (Subscap >10mm)

Meat all day

- All protein comes from meat (excp. Peri-W)
- One type of meat per day
- 6 meat meals per day
- The main objectives is to maximize the consumption of high quality protein
- To bust a plateau in size gain primarily in males with lower bodyfat (ca. 6%) and moderate bodyweight (ca.90-100kg)

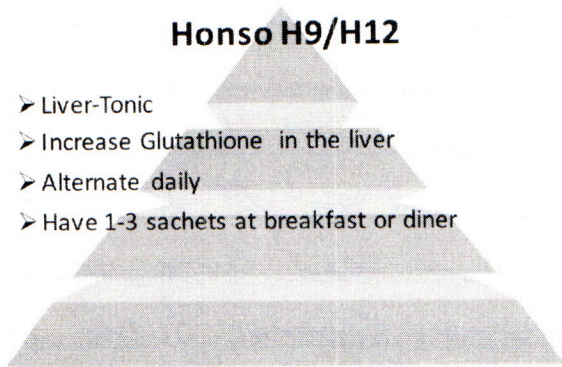

Bobsled Athlete – 1,5 to 2,5kg Meat/Day

YPM: Hautfaltenmessung & Analyse

Honso H9/H12

- Liver-Tonic
- Increase Glutathione in the liver
- Alternate daily
- Have 1-3 sachets at breakfast or dinner

Coptis Chinensis

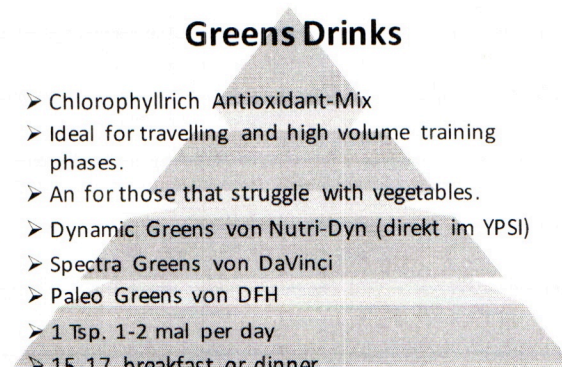

- Most bitter herb in TCM
- 1 Dropper in water up to 3 times a day
- Only before bed for 1-3am wakeup
- Max 1 week at 3 times a day
- Activates a „stagnating Liver Chi“ - Detox
- Via Thorne Research/HerbPharm/CoActiveHealth

PBerubst auch

Greens Drinks

- Chlorophyllrich Antioxidant-Mix
- Ideal for travelling and high volume training phases.
- An for those that struggle with vegetables.
- Dynamic Greens von Nutri-Dyn (direkt im YPSI)
- Spectra Greens von DaVinci
- Paleo Greens von DFH
- 1 Tsp. 1-2 mal per day
- 15-17, breakfast or dinner

Peri-Workout Carbloading Protocol

- 200-500g Carbs pre, during and postworkout
- The goal is to maximize the metabolic adaptations behind hypertrophy esp. Glycogensupercompensation based on high training volume (i.e. giant sets) and high carb tolerance
- Use a CGM unit and closely observe the Suprailiac/Subscap Skin folds

No faster way to put on size.

High Frequency Training & Caloric Excess in undulating Periodization

...for the fastest progress in Bodybuilding & Strength Training

Squat Holiday / Strength & Mass Holiday etc.

*Move up a weight class:
3 Topics for quick size:*

1. Don't get fat its no functional class

2. U need to put size and strength (functional Hypertrophy)

3. No time / As fast as possible

For a Maximum of 2 weeks.

YPSI Green Week - Functional Fasting

Meal 1

1-3 Tbsp. vegan Protein powder with 1 Tsp. YPSI AminoElektrolytKomplex in Water
Green Vegetable

Meal 2

1 Tsp. Greens-Powder with 1 Tsp. YPSI AminoElektrolytKomplex in Water

- Alternate both meals
- Min. 3 meals a day each

Tracking (IFMM) it works in 2 cases: Caloric-Reduktion +
hohe Aktivität

caloric

Orthomolecular Medicine & Supplements for Strength Training & Bodybuilding

→ Meal Prep & Track ist super, aber
nicht für den allgemeinen Menschen

Cellular Health and Progress in Strength & Hyperophy

Orthomolecular medicine, a form of alternative medicine, aims to maintain human health through nutritional supplementation. The concept builds on the idea of an optimum nutritional environment in the body and suggests that diseases reflect deficiencies in this environment. Treatment for disease, according to this view, involves attempts to correct "imbalances or deficiencies based on individual biochemistry" by use of substances such as vitamins, minerals, amino acids, trace elements and fatty acids.

→ Auch für BBer in den
letzten Wochen

Raponticum aka Beta Ecdysteron

- 4-8 Caps PreWO or 3x2
- Works only with high testosterone (Triceps <8mm)
- Training-Drive and Look change dramatically
- Available at the YPSI (not on the reseller list)

→ female <12 mm

→ The lower triceps fold, the better
the effect! It makes sure that
Testost. makes its job better

Noch wegen Corall. +

→ Fett, Pasta ... rein Carbs

(Eiswörter & Beeren zum
Do No Drink (eden))

No ALB Monkey:

No ~~meat~~ Meat, no eggs,
no carbs

Just Fisch & Veggies

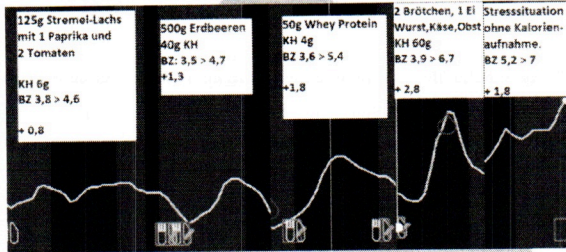

+ 8-12 L Water

MT Stop drinking Mineral-Epsom Salz-Bad
Water; Start 20 Min + 40 Min
drinking distilled Water zu decken mit Decken etc.

3 Gründe Glukose:

1. Immunsystem
2. Die Leber kann es in andere Aminos umwandeln
3. Es speichert Aminos in den Zellen
4. Darmsanierung
5. Immunboost wenn man sich krank fühlt oder hohes Trainingsvolumen

Cortisol, Carbs & Bloodsugar

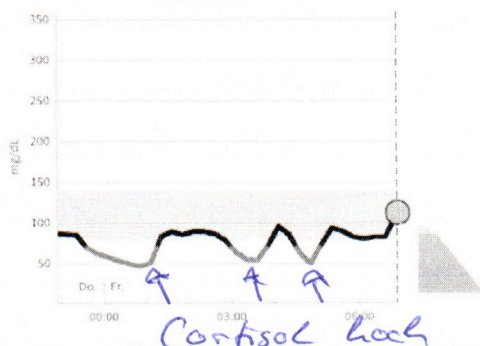

Case Study

- Start in the first week of January
- Progression from one carb meal per week to five out of six meals per day with carbs
- Exclusivly rice, oats and potatoe
- Mp Maltodextrin, PWO Proteinpowder and Refeeds/Sugar.

Nutrition & Biochemistry

Whats relevant:

Cortisol - Catabolic

Testosterone - Anabolic

Insulin - Anabolic

Melatonin - Anabolic

→ Incr. Muscle tissue

→ Glycogen stores

→ Anabolic

Nutrition can improve each of these.

At the right time.

Strength and BB: The higher
Cortisol, the higher tension, the
higher Power. Kaffee dazu

Bodybuilding the most mechanical
Mechanism is Muscle Damage

→ The more Damage, the more
Proteinsynthesis (Cortisol has to be
high).

No Refeed if the overall
Carb intake during the week

The most big guys are Mapper
↳ Just mopping after Workout (30min)

Carb Cycling

Rotation of Low/Med/High Days to maintain
Insulinsensitivity

Low Day - Rest Day (Off Day)

Med Day - Training Day

High Day - Refeed Day (Off Day)

The higher the overall the Carb Intake the lower
the necessity of Carb Cycling and esp. Refeeds.

→ It's not necessary for strength training.

Ketogenic Diet for the final stages

- Mod Protein, High Fat, No Carb
- Ideal in the late stages of Comp/Photoshoot preparation for the less carb-tolerant
- Extensive periods will diminish Size Gain and Recovery due to an overflow of catabolic hormones

Buch: Bulletproof Diet

(Für Leute die nicht trainieren

und physisch & psychisch besser werden wollen) Ketose 70% Fett

→ Putting on size on keto diet
does not happen very often.

→ Mental condition ~~is~~ Beta is good for.

~~Buch~~

→ Die meisten Leute brauchen für

To improve Control: Meat (Protein) (To rise - Coffee / Tea

Testosteron: Magn. / Zink / Saturated Fats / B6

Improve T&C ratio: PWO ~~Heute~~ Nutrition

Melatonin:
Carbs at night
